EVIDENCE OPTIX®
SECURITY / COMPLIANCE OVERVIEW

Evidence Optix® is a technology-assisted workflow designed to apply a defensible proportionality methodology to the legal hold and collection processes of ediscovery.

The privacy and security of our clients' data and work product is a core philosophy at Insight Optix. We understand that building a culture of trust and reliability is essential. Accordingly, Evidence Optix® was designed and developed with a steadfast commitment to data security industry standards to ensure the overall protection of client data. In addition to existing available tools, we also integrate additional security measures for increased protection.

Evidence Optix® is a Cloud-Based Application:

Evidence Optix® is hosted by Amazon Web Services (AWS). AWS' cloud services are fully compliant with:

- SOC-I and SOC-II
- ISO 9001/27001/27017/27018
- GDPR & GDPR DPA (Data Processing)
- EU-US Privacy Shield
- HIPAA
- Read more about AWS compliance programs.

Security Features Include:

- Two-factor password authentication
- Data encryption at rest and in transit using AES-256 encryption
- Permission-based user roles
- High availability cloud infrastructure
- Business continuation and daily backups
- 24/7 monitoring services
- Incident management and escalation procedures
- Employee training and regulatory compliance
